## Module 1 Project 1 reflection

Derek Kwon

I enjoyed this project as an introduction to computer science. They were not too challenging, and it was clear what skills and concepts were being tested. They were similar to the projects I did in AP computer science in 11<sup>th</sup> grade in high school. Unlike back then, however, I did these projects on my own without help from anyone else. Back in high school I was not a very good listener and had trouble focusing in class, which is why I often struggled with the assigned projects. I have since gotten better at listening and absorbing information and completing these projects on my own made me feel good and hopeful that this class will go well, even if they are very simple projects. The overdue tax program where I had to correct the code was the most difficult, but finally understanding and completing it made me feel all that much better. It was a bit confusing that the output of the overdue tax program did not include a dollar sign and instead read out as "Your total payment is 544" or "Your total payment is 590". Other than that, nothing concerned me. Overall, this was a very good introductory project for computer science.
