

Derek Kwon

Final project reflection

This project was extremely difficult and yet it effectively combined everything we have learned this semester. I was completely humbled by the difficulty of some of the methods, and I don't expect a very good grade. Unfortunately, unlike the other projects, I did not get to think about and have fun with this one because of my limited time to submit this project. However, I am still grateful for the challenge, and I thank you for the previous projects that helped me to complete (or at least try to complete) this one. The `get_post_date_info` was by far the most difficult, but I think I managed to figure most of it out, which I am very proud of. As for the `find_author_by_keyword` method, I couldn't figure it out and because I was short on time, I looked on the internet. The information I found was new and was not in class, but I think it makes the code a bit more efficient. I have attached the link in this reflection. I cannot thank you enough for introducing me into college level computer science smoothly and with kindness. I hope you have a fantastic winter break and a productive next semester.
